

CB-25

DATA BUOY

- Compact and easy to deploy
- 4G cellular or Iridium satellite telemetry
- Supports a variety of environmental sensors
- Autonomous battery & solar power
- Rugged polymer-coated foam hull

The **CB-25** Data Buoy is a compact, affordable, and easy to deploy platform for both water and atmospheric observations. At 18" hull diameter and less than 30 lb. (13.6kg) weight, it can be used for drifting, tethering or mooring applications. The buoy integrates the **X2-SDLMC** Submersible Data Logger, which includes external sensor ports to support weather stations, thermistor strings, multi-parameter sondes, Doppler current profilers, GPS, and other monitoring instruments.

Constructed of an inner core of cross-linked polyethylene foam with a tough polyurea skin, the **CB-25** is designed for years of service. A rechargeable battery with integrated solar panels power the system continuously, and all electronics are housed in a quick-removable **X2-SDLMC** data logger package with wet-mate connectors. Three 1.5" pass-through holes facilitate cable routing of underwater sensors.

Available with integrated 4G cellular or Iridium satellite communications, the **CB-25** buoy sends data in real-time to the cloud-based **WQData LIVE** datacenter. In a basic configuration, this free service allows users to securely access and analyze data, as well as share data through an API or auto-report. Subscription-based tiers of **WQData LIVE** are also available for advanced reporting, alarming, and data management.
